

Group members: Larry Li, Yufeng Xie, Jiaying Hou

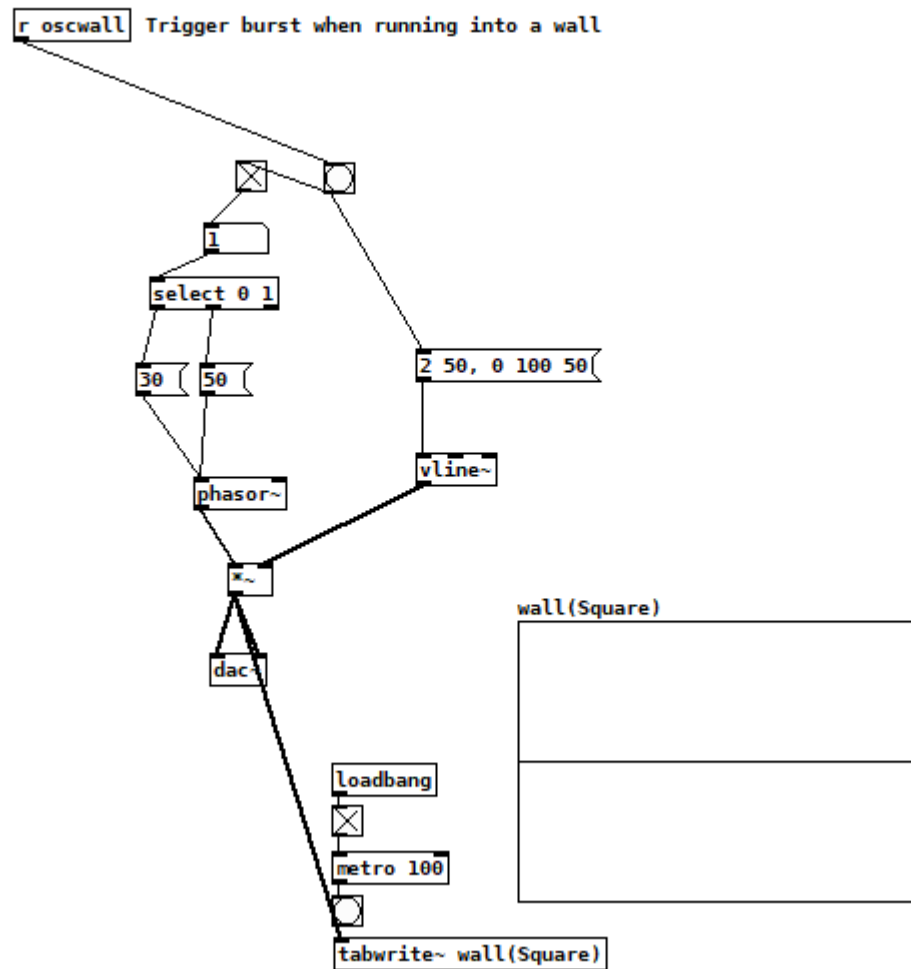

There are 6 different sounds in the PD file:

- Sound Effect of picking up the rotating cubes.
- Sound Effect of hitting the wall.
- The sounds while the ball is rolling.
- General BGM, tempo increases as more cubes are collected.
- Failure BGM.(it plays when the ball hits the red thorns)
- Victory BGM.(it plays when the ball collects all the cubes)

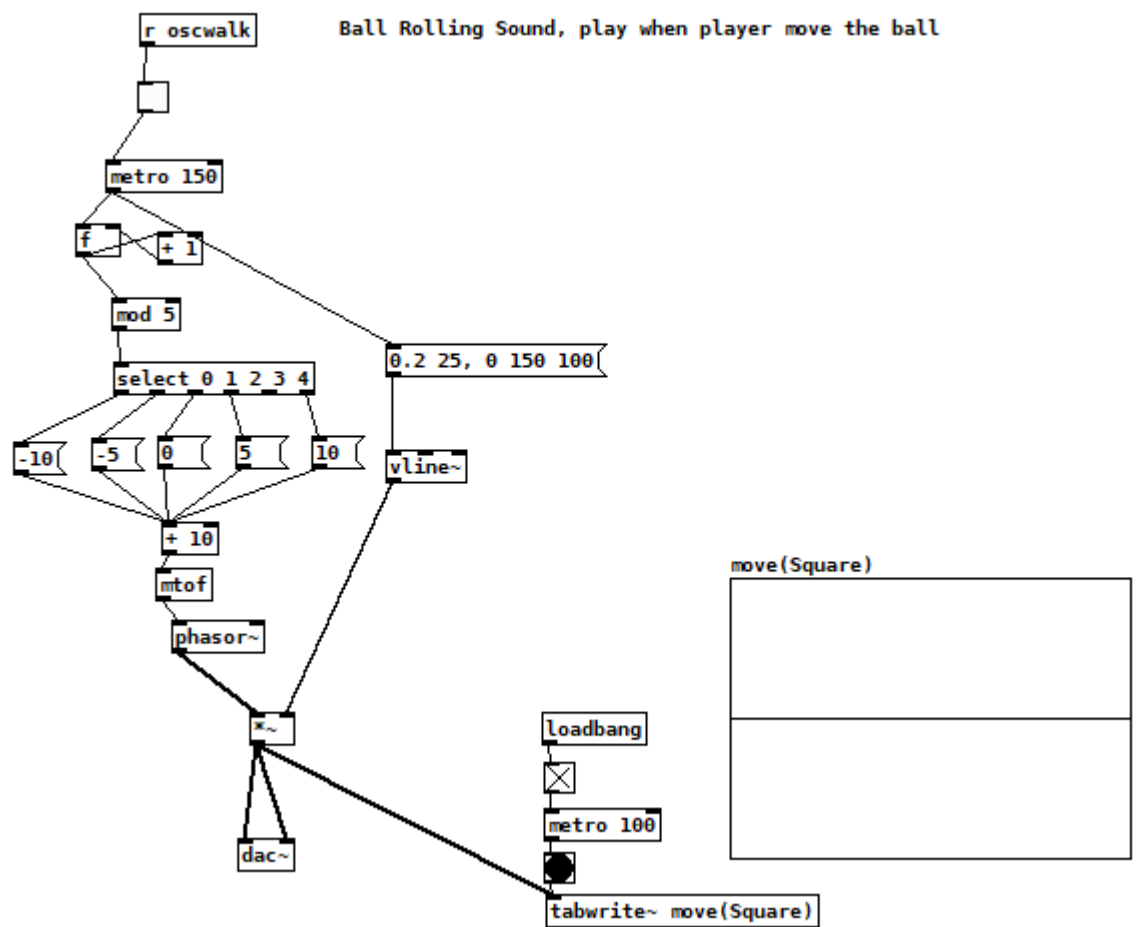

Instructions for the PD file:

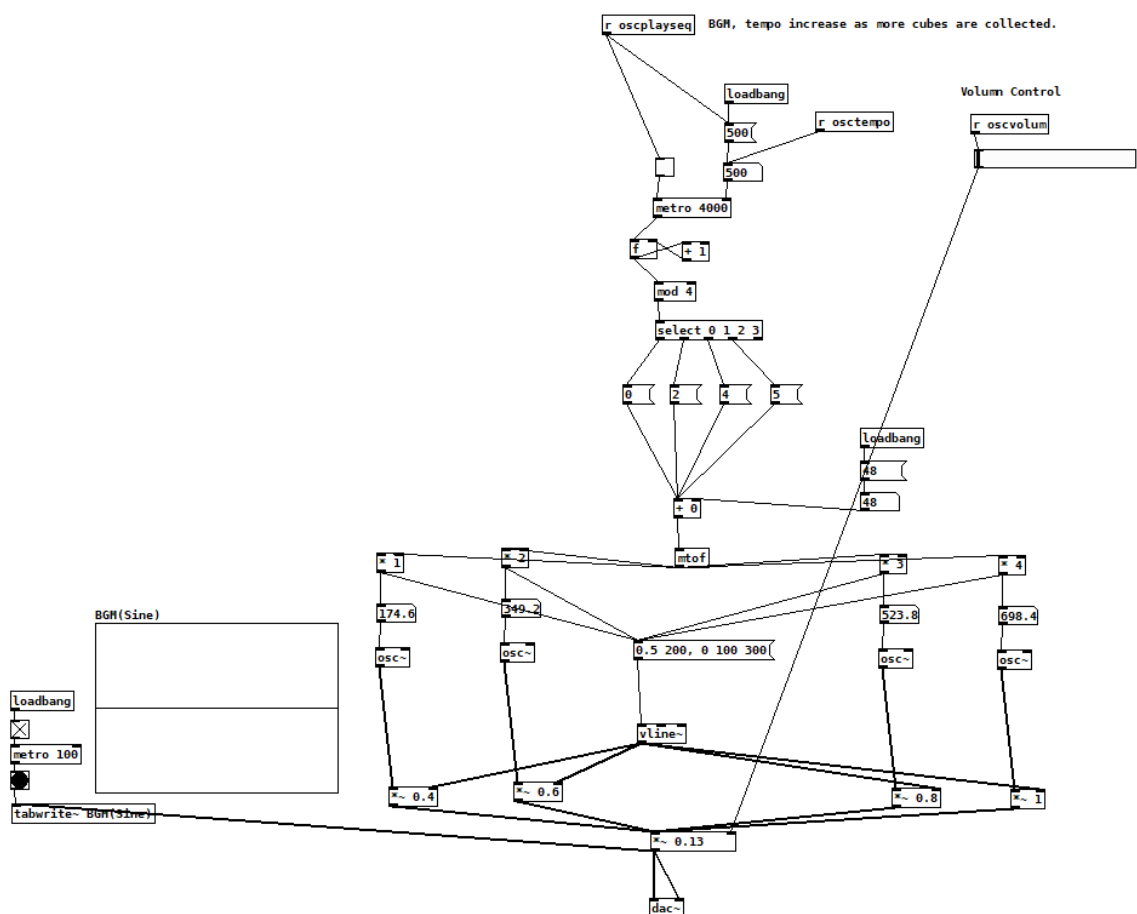

2. For the pick-up sound, slide the number box below the r_osctrig to change the sounds.

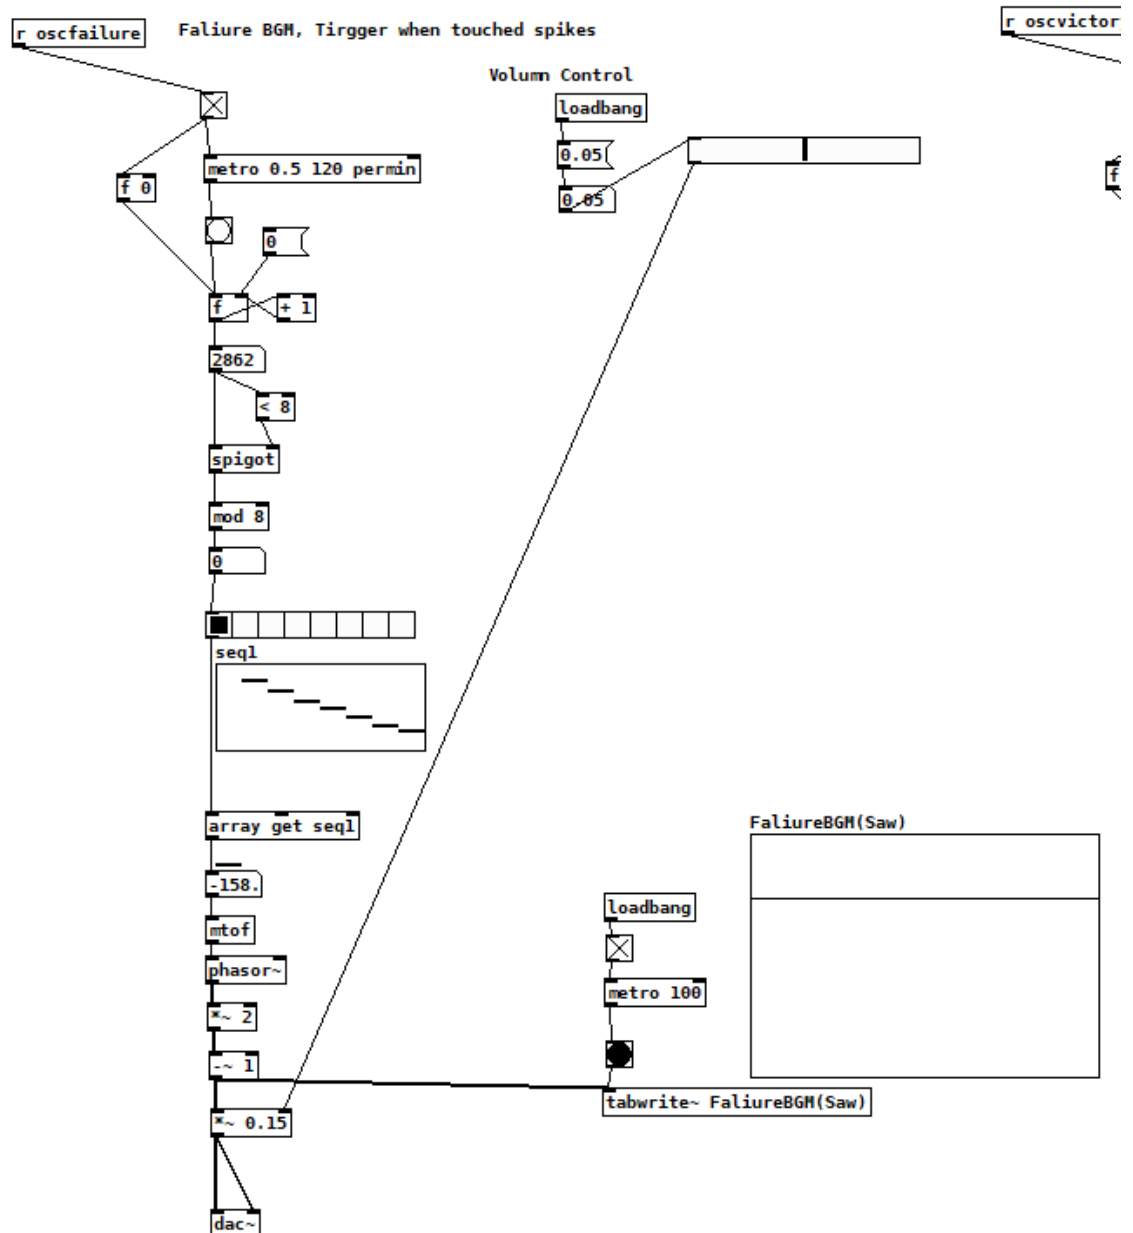

- For the hitting sound, click the bang to hear the sound.

4. For the ball rolling sound, check the toggle box to hear the sound.

- For the general bgm, check the toggle box below the `r_oscplayseq` to start rolling the sounds, and use the slider on the top right to adjust the volume.

- For the Failure and Victory BGM, check the toggle box on the top to hear the sound and use the volume control to adjust the volume.
- There are some graphs that shows the waveforms aside each sound.
